Also mention the maximum, minimum and average chain lengths in the Hash tables, respectively.</p> <p>Keys: 5, 28, 19, 15, 20, 33, 12, 17, 10.</p> <p><math>h(k) = k \bmod 9</math></p>  <p>Chaining</p> <p>Maximum chain length = 3 (28 -&gt; 19 -&gt; 10)</p> <p>Minimum chain length = 0 (0, 4, 7 slot doesn't have any element)</p> <p>Average chain length = <math>\frac{0+3+1+1+0+1+2+0+1}{9} = \frac{9}{9} = 1</math></p> | 6 |
| 5b. | <p>Consider a list of numbers 34,16, 2, 93, 80, 77, 51 with Hash table size 10. Mention the order of the elements in the Hash table from index 0 to size-1 after applying the hash function (Key%HashtableSize).</p>   | 4 |

The given data,

list of numbers (34, 16, 2, 93, 80, 77, 51) and has a table size is 10.

| Element | Hash function | Index |
|---------|---------------|-------|
| 34      | $34\%10 = 4$  | 4     |
| 16      | $16\%10 = 6$  | 6     |
| 2       | $2\%10 = 2$   | 2     |
| 93      | $93\%10 = 3$  | 3     |
| 80      | $80\%10 = 0$  | 0     |
| 77      | $77\%10 = 7$  | 7     |
| 51      | $51\%10 = 1$  | 1     |

The hash table is,

| index | Value |
|-------|-------|
| 0     | 80    |
| 1     | 51    |
| 2     | 2     |
| 3     | 93    |
| 4     | 34    |
| 5     |       |
| 6     | 16    |
| 7     | 77    |
| 8     |       |
| 9     |       |

The remaining index stores the null values.

**Hence the correct answer is** 80, 51, 2, 93, 34, null, 16, 77, null, null.
